

Pool constructed by L & V Project Pools.

Glass half full

Glass pebbles are the way of the future

The Blue Glass Pebble Company is

Australia's premier supplier of glass pebble finishes for concrete pools. They believe their product offers customers the most stunning finish, the best value for money, and also the most durable and user-friendly finish on the market. They back their product so much they offer an industry-leading 10-year warranty on their range of spectacular glass pebble finishes.

Glass pebbles are the best and most colour-fast way for a customer to achieve a vibrant, colourful water effect. Whether it's a deep oceanic blue or a tranquil lagoon setting the customer is hoping to achieve, glass pebbles offer a natural solution that cannot possibly fade or lose its colour over

time — when it's done right.

There are products on the market that use 100 per cent glass, no pebble, and cement. These pool surfaces will inevitably fall victim to a natural chemical reaction scientifically known as the alkali silica reaction.

There is a limit to what concentration of glass you have in your pool finish. The Blue Glass Pebble Company's finishes consist of a mixture of glass pebbles and natural white pebbles. They use the highest concentration of glass you can safely put in a pool before you start to encounter problems caused by the alkali silica reaction.

There is no question that glass pebbles are the way of the future as far as colourful pool finishes are concerned, but there is certainly

a right way and a wrong way to use glass in a cement-based aggregate.

Be sure not to accept inferior imitations. Ask for The Blue Glass Pebble Company by name and ensure you get what looks the best and, more importantly, what works!
